DETAILED ACTION

The amendment is entered. Prosecution is reopened.

Claim 17 is rejected as being drawn to an improper Markush Group. The claims are drawn to multiple inventions (cephalosporins, oxacephems and carbacephems) for reasons set forth in the requirement for restriction of 07/15/2003. This does not constitute an art recognized genus. Because of the marked structural difference at a part of the molecule essential for utility, these claims are deemed to lack unity of invention (see *In re Harnish*, 206 USPQ 300). The claims have been examined only to the extent that they read on the elected invention. Cancellation of the non-elected subject matter (the O and CH₂ choices) will overcome the rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1. The definition of R was omitted from claim 17. This is presumed to be a copying error, as it was present previously.
2. The last R' choice is missing a carbon atom; the structure appears correctly in the specification; see page 4.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 17 and 19 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-24 of copending Application No. 10884019. Although the conflicting claims are not identical, they are not patentably distinct from each other because the 10884019 claims are just somewhat narrower versions of the claims here in some regards, broader in others. The claims in 10884019 correspond to linker = methylene, but have a broader definition of the acyl group.. Note that claim 19 is just a very slightly broader version of claim 10 of 10884019, i.e. when $n=1$, claim 19 is the same as claim 10.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
